Quality | Security of Supply | Technology | Competitive prices

## Ambassador for better sleep

Anti-Snore Partner Sweden AB is the international company behind the patented Eezyflow® Sleep Collar – a sleep collar in viscoelastic polyurethane foam. The purpose of this physiologically designed sleep collar is to free the airways, so that nocturnal snoring is reduced, and the user can obtain a better night's sleep and thus an increased quality of life. The sleep collar can be used both at night and when travelling

## A geometrical advanced piece

Tinby A/S entered into a close development partnership with Anti-Snore Partner Sweden AB to develop the sleep collar. Tinby A/S wants to be a strong business partner when it comes to raw materials, technology and processes – even with complicated products such as Eezyflow® Sleep Collar.

## Better known as memory foam

Eezyflow® Sleep Collar is cast in viscoelastic flexible polyurethane foam – better known as memory foam. The polyurethane is shot into a movable aluminium mould, ensuring that the ideal angles for volume and ventilation are achieved. The mixing of the raw material is done mechanically in a high-pressure machine. This way, a completely homogenous material is achieved, which is a prerequisite for casting the collar. The viscoelastic foam is snow white, which sets high quality demands for the mixers and processors that must be kept completely clean.

## What the customer says

"In the product development stage, Anti-Snore Partner Sweden AB needed a supplier like Tinby A/S. Various suppliers had previously bid on the job, but without achieving a satisfactory quality. The challenge was to produce a specially designed physiological sleep collar in soft memory foam for the use within health and personal care. Tinby A/S succeeded in meeting this demand far beyond expectation – not least in relation to the high quality demands we had set for this CE-certified, medical technical product, classified in "Class 1" by the Swedish Läkemedelsverket."

Ann-Christine Krook, CTO, Anti-Snore Partner Sweden AB
